

DialDirectly (for Skype™)

© by Infonautics GmbH, Switzerland

DialDirectly can dial and redial names and phone numbers directly via Skype™ by copying them from any application via customizable hotkeys. The last 10 numbers are available for redialling.

(To dial chargeable phone numbers in Skype™, you need an appropriate account with Skype™.)

System Requirements

Microsoft Windows™ XP/Vista/7/8/10.
Program space on hard disk: less than 1 MB.
Skype™ installed on the PC.

Skype™ is a trade mark of Skype / Microsoft and its related companies.

Installation

The program can be installed and uninstalled easily. No modification of the operating system will be taken. To install start the setup program named „DialDirectlyForSkypeSetupEN.exe“. After installing there will be a new program group in the Windows start menu with the entries „Start DialDirectly“, „Manual“ and „Uninstall“.

After the launch of "DialDirectly" the icon  appears on the taskbar. With a mouse click on the icon and choosing "Settings, the hotkeys can be changed and it can be determined whether the program should always be started automatically with Windows.

License

The program is offered as shareware and requires a license key for regular operation. Before buying it can be freely and fully tested. Without a license key the program dials the phone number or name with a delay and a shareware notice will show up. The license key can be bought at small fee at:

<http://www.infonautics.ch/dialdirectly/buy>

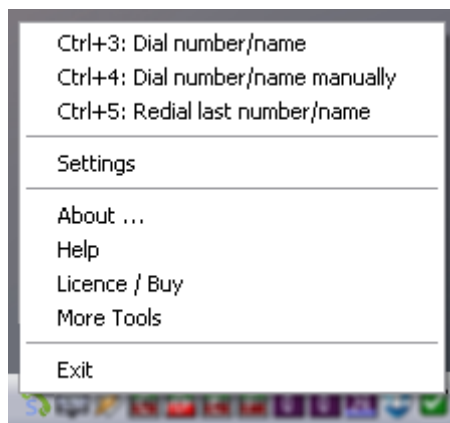

The license key is non-expiring and valid for all future updates.

Enter the license number in the menu "License / buy" in the appropriate field and press "OK". Afterwards the shareware notice will not appear again.

Application

After program start this icon will show up in the taskbar. When clicking on the icon the program menu below will appear. The dialling functions can also be triggered directly by hotkeys.

Dial number/name: Any phone number or name stated in any application (Word, Excel, Email, Browser etc.) can be highlighted with the mouse and then copied to the clipboard using the keyboard shortcut CTRL-C. Then, the number can automatically be dialled by using the individually defined hotkey (Default CTRL+3).

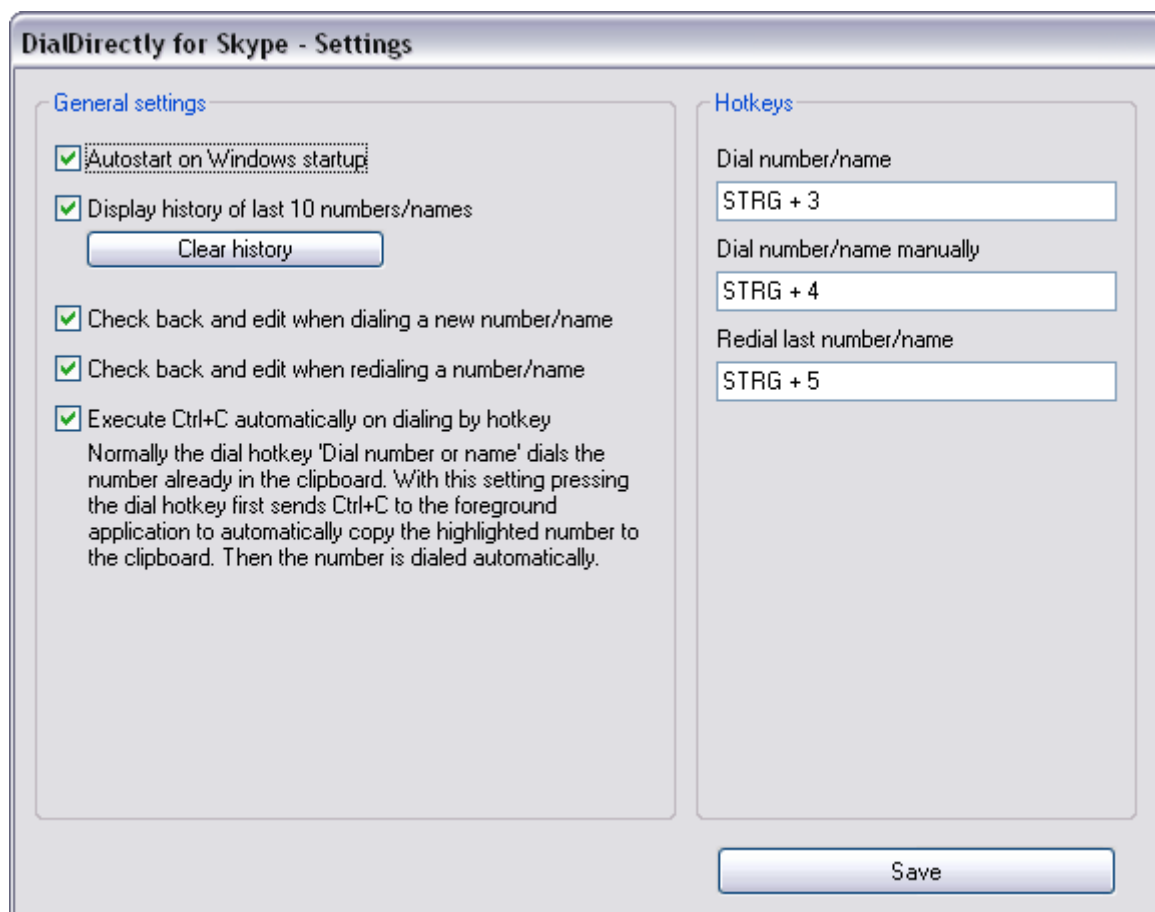

The copying to clipboard by CTRL-C can be done automatically when defined so in the "Settings". Thereby, the requested number/name can be dialled directly by only highlighting the number/name with the mouse and using the defined hotkey (Default CTRL+3).

Dial number/name manually: Enter and dial a number or name manually on your keyboard. Thereby, the number/name will be available in the history for redialling. (Default CTRL+4)

Redial last number/name: Call the last dialled number or name again. (Default CTRL+5)
If "Display history" is selected under settings, the last 10 numbers will be displayed in the menu for direct selection.

Settings: see following paragraph.

Program Settings

General settings: As described.

Hotkeys: The dialling functions can either be triggered by the program menu or primarily and directly by the defined hotkeys. The standard settings CTRL+3 until CTRL+5 can be adjusted according to personal preference. Simply place the cursor in the appropriate field and press the desired keyboard shortcut. Please pay attention that hereby already existing keyboard shortcuts of other applications might be interfered or deactivated. These keyboard shortcuts will be activated again as soon as the settings have been reset or the program has been closed.

Features
